

Serial No. 10/743,178

Please replace paragraph beginning on page 6, line 4
with the following amended paragraph.

It is yet another object of the invention to provide a path of travel for the defined line connection or interconnection, which may be a junction connection traveling lengthwise of the upper support [,] and which does not pass over any rotors, and whereby possible derailment of that connection by a rotor is prevented. In this respect, the primary rotors preferably include a first rotor having spacing from said counterbalancing means which exceeds said path of travel, for shade or blind height adjustment between uppermost and lowermost positions.
